

Corporate Profile

Network Video Technologies

Network Video Technologies is the world leader in UTP-based hybrid analog video and camera power transmission. From the beginning, our focus on this technology has enabled us to help our customers connect the world of cost-effective analog cameras and UTP, to a thoughtfully deployed digital future.

Now, with the introduction of the NVT Ethernet-over-coax product range, we are deploying technology that allows our customers a choice; to connect and power IP cameras over installed coax cable, at distances beyond PoE.

We have an industry acknowledged reputation for supplying products that are best in class, easy to use, well supported and feature a lifetime warranty.

NVT's primary market is the CCTV segment of the worldwide security industry. In most global markets NVT sells through a mix of distribution and direct to the integrator channel. Markets are served by a balanced worldwide network of direct salespeople, and independent representatives.

Recent Awards for product and customer service excellence

- ISC and IFSEC Product Awards
- Three time PSA Superstar Award Winner for outstanding customer service

Adherence to Industry Standards

All NVT products are UL, cUL listed, CE, WEEE, RoHS compliant and feature a limited lifetime warranty with an advanced replacement policy.

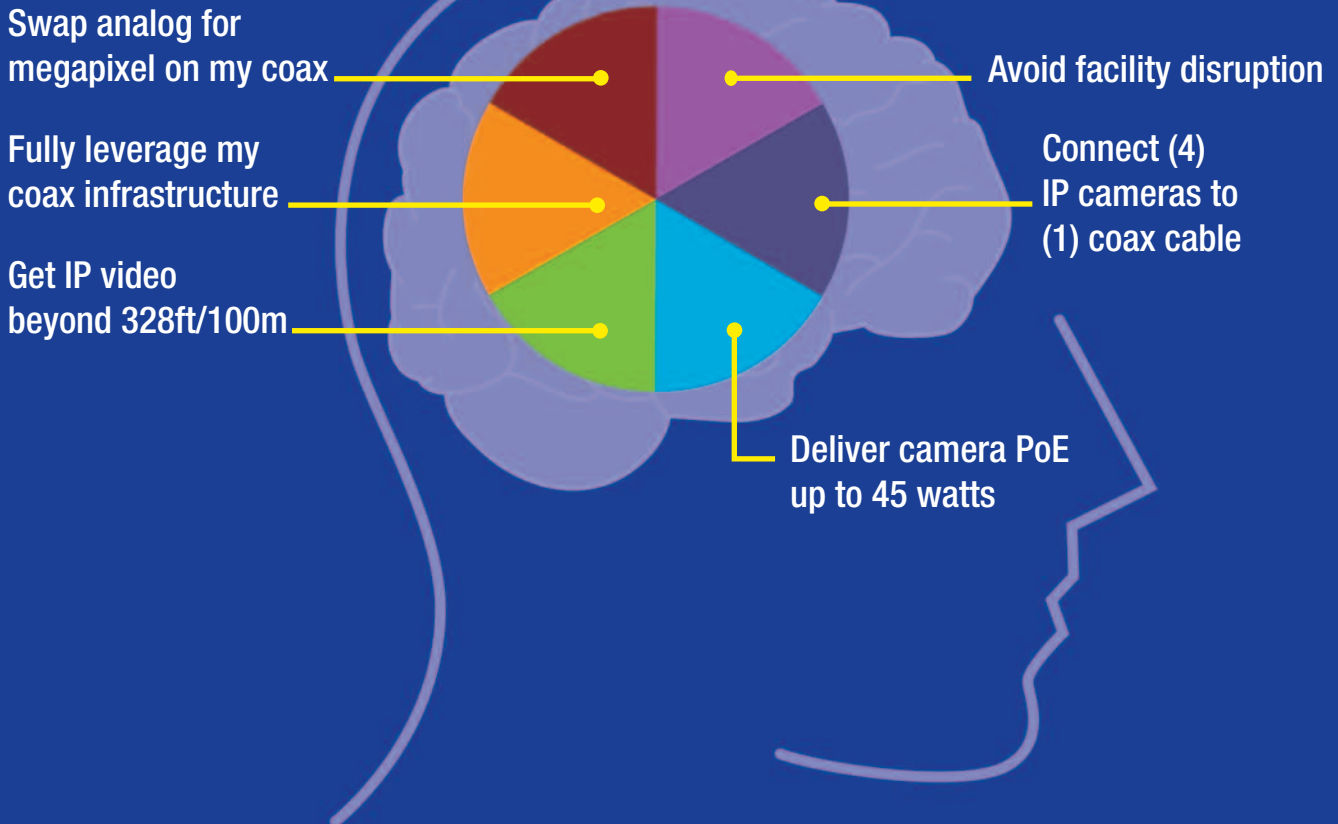

Global Support Footprint

NVT has a worldwide network of direct salespeople, and independent representatives for account support in North America, Canada, Mexico, Brazil, England, Belgium and Singapore.

IP ON THE BRAIN?

Geez, If Only I Could...

Upgrade To IP/Megapixel Cameras Using Existing Coax

Allowing legacy coax cable to be used to transmit Ethernet video, the new breakthrough NVT EoC transceiver system enables analog cameras to be swapped out to IP/Megapixel models without the expense of re-cabling.
