

How to Easily Secure an Existing Home or Business Without Wiring

Owners and employees are sometimes unaware of occurrences happening in and around a building or home, and the incident could leave someone at risk. STI offers multiple wireless products designed to alert when different conditions occur to a protected area.

Did someone enter the driveway or parking lot? What emergency button was activated? Did an employee exit through an emergency door? Was the gate to the pool opened? Did someone move a fire extinguisher? Tired of trudging out in the rain or snow to check if the mail was delivered? Lay in bed and wonder if a garage door is open?

STI's wireless alerts easily retrofit to all of these situations, and more. The alerts let someone know what's happening before taking precious time to investigate.

With the 4-Channel or 8-Channel receiver, monitor up to four or eight different STI wireless sensor devices at a single, convenient location. Supervised for low battery and signal reception, the receivers have an audible chime tone or 12VDC output. The 8-Channel Receiver offers a mirror function

that can work with up to four additional 8-Channel Receivers. Devices can be latching or momentary by zone.

To work with the receivers, STI offers a number of wireless sensors. STI Wireless Alert Series can monitor: open/closed garage door; shed; gate; medicine cabinet; mail delivery; car entering/leaving driveway; open exit door; removed fire extinguisher; activated push button; etc. When a monitored site is triggered, the sensor sends a signal to the receiver, causing it to beep and flash. The unique sensors include the following:

Wireless Driveway Monitors (solar or battery powered): know when a vehicle enters the protected driveway and never be surprised by unexpected guests.

Wireless Mailbox Alert: alerts when the mail is delivered and eliminates repeat trips out to an empty mailbox.

Wireless Garage Sentry Alert: receiver alerts when garage door is opened and provides door status (open or closed).

Wireless Universal Alert: alerts when a monitored site is tripped. Can be used on a medicine cabinet, gate, window, shed, etc.

Wireless Fire Extinguisher Theft Stopper®: trips when a fire extinguisher has been moved from its original position.

Wireless Exit Stopper®: signal transmits to receiver when a protected door is opened.

Wireless Stopper® Station Shield with Sound and Transmission: alerts when the push-button cover is lifted (additional transmission upon button activation).
